

# WEDDING MANAGEMENT SYSTEM

## DESCRIPTION

- A Database system to manage all wedding related activities.
- Handles clients, events, vendors, guests, bookings, and payments.
- Provides a centralized system for wedding planning and execution.
- Reduces redundancy and improve efficiency in managing data.
- Ensures accuracy and consistency through constraints and normalization.

## ACHIEVEMENTS

- Vendor coordination across multiple services(catering, photography, decoration etc).
- Guest list management with invitation status tracking.
- Payment tracking with multiple payment modes.
- Optimized database design following 3NF normalization.
- Scalable system with potential for extra features (Seating arrangements, gift registry).
